| | in Season as these will usually be highest in | | | | |
| | nutrients. Nutrients are lost with the process | | | | |
| | of freezing the seasonal produce. | | | | |
| | 2. Judicious Use of Water: Up to 50 percent | | | | |
| | of vitamin C, thiamin, vitamin B6 and folate | | | | |
| | content in food can be lost to the water it's | | | | |
| | cooked in. In order to retain water-soluble | | | | |
| | nutrients, use cooking methods like | | | | |
| | | | | | |
| | steaming or stir-frying that use less water. | | | | |
| | Use less water in steaming and boiling, and | | | | |

| | nutrients. | | | | |
| | 3. Short Cooking Durations: As a rule of | | | | |

| | heat, the more nutrients are lost. To reduce | | | | |
| | cooking times, cover the pot to retain heat | | | | |
| | and avoid evaporation; place vegetables in | | | | |
| 1 | | | | | |
| | already boiling water, and learn to enjoy most vegetables with a crunchier texture. | | | | |

| | 4. Cut in Bigger Pieces: Chopping foods into smaller pieces increases the surface area exposed to light, heat and water – three factors that degrade nutrients. 5. Correct Storage: Nutrient loss in many fruits and vegetables can be decreased with cooler temperatures, high humidity and less air contact. Store produce in airtight containers in the fridge. 6. Rinse Fresh Vegetables Well Just Before Using. Even those with skins need to be washed to remove bacteria, insects, and as much pesticide as possible. Do not soak vegetables, as that can remove key nutrients, like vitamin C. 7. Wash Whole Fruits and Vegetables: Washing vegetables or fruits after cutting leads to more nutrients being leached out in water. Wash whole and then cut. (Any 4 points) | | | | |

| Q. 21 | Difference between Steaming and Stewing: In steaming method, the food is exposed directly to steam. Cooking an item by lightly covering the pan or by wrapping it in foil so that the food gets cooked in its own moisture e.g., Jacket potatoes, steamed fish. Steamers can be used for cooking rice, dal that holds the steam under pressure, the temperature varying from 106 degree Celsius to 121 degree Celsius. This method is widely used as it minimizes the dissolving away of nutrients. Whereas Stewing is a process in which the food particles are surrounded by liquid and it is cooked in slow heat for a long time. It is usually served along with the liquid which was used for stewing e.g., stew | CBSE Student Handbook | 2 | 6 | 4 |
